

F-Secure Anti-Virus Small Business Suite

New, Easy-to-Use Information Security Solution for SMB

Local network, file and e-mail servers as well as a fast connection to the Internet are the basis for effective work also in small and medium-sized businesses. Traditional antivirus is no longer enough for protecting against clever hackers or new and fast-spreading viruses, worms and Trojans.

F-Secure® Anti-Virus™ Small Business Suite is an easy-to-use, centrally managed, data security solution, designed especially for the Microsoft® Small Business Server environment. It is a good fit for small and medium sized businesses, and it includes all the necessary components in one flexibly licensed package, (for 5-99 devices). With F-Secure Anti-Virus Small Business Suite, you can concentrate on your business and let F-Secure deal with network threats.

F-Secure Anti-Virus Small Business Suite includes the following award-winning software:

- > F-Secure Client Security™ 7 provides centrally managed protection for corporate workstations by combining robust signature-based protection with advanced behaviour-monitoring to prevent both global and local malware epidemics and intrusions.
- > F-Secure Anti-Virus™ for File Servers ensures that employees who connect to corporate file servers with infected machines do not spread viruses further into the network.
- > F-Secure Anti-Virus™ for Microsoft Exchange protects Microsoft Exchange environments by removing viruses, worms and Trojans hidden in e-mail attachments, and documents in public folders.
- > F-Secure Policy Manager™ offers an easy and scalable way to deploy security applications, define and deploy policies, and monitor the system to ensure compliance with corporate security policies. With F-Secure Policy Manager, corporate IT administrators can manage not only antivirus solutions, but also all critical content security solutions on all tiers of the network.

This new information security solution stops hackers, viruses, worms, Trojans, spyware, adware and zero-day threats in the network, whether they spread via e-mail, file servers or workstations. Automatic updates several times a day and short reaction times during virus outbreaks guarantee that the virus protection is always up-to-date.

Debian 3.1
- F-Secure Policy Manager Proxy
Windows 2000/XP/2003

*Available in 2007 in 32-bit environments

Easy-to-Use, Low Cost Administration and Deployment

All F-Secure Anti-Virus solutions are manageable with one system from one location. F-Secure Policy Manager allows all antivirus products to be centrally installed, configured and monitored. Comprehensive reporting and alerting is available from the management console or through a web browser.

Extensive Solution

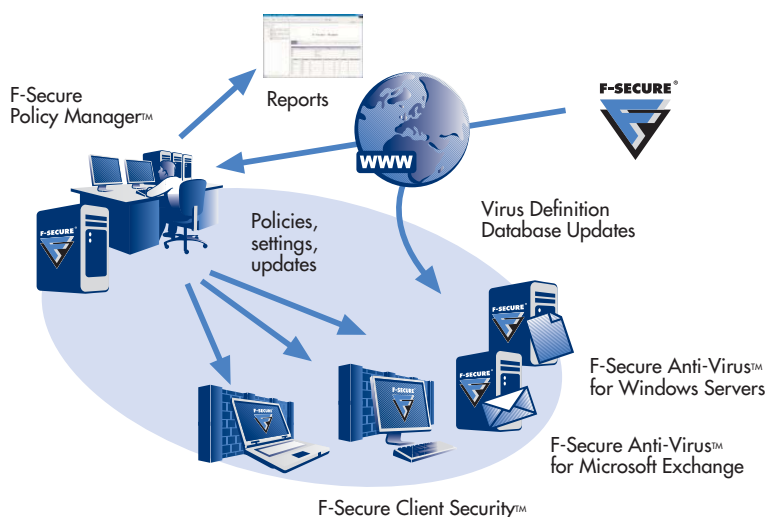

F-Secure Anti-Virus Small Business Suite stops hackers, viruses, worms and Trojans in the network, whether they spread via e-mail, file servers or workstations.

24/7 Virus Research

Antivirus products are only as good as the research and dedication behind them. The F-Secure Anti-Virus Research Team is on call 24-hours a day, seven days a week responding to new and emerging threats. The research team, staffed with globally/recognized virus experts, develops and distributes protection against new viruses promptly after their discovery, and in many instances, well in advance of other antivirus vendors.

Automatic Virus Definition Updates

Automatic updates several times a day and short reaction time during virus outbreaks guarantee that the virus protection is always up-to-date. The signature files of virus definition updates are automatically downloaded in the background using minimal bandwidth. The system administrator can always be sure of having the latest updates without searching the Web.
